ABOUT THE PROGRAMME

This intensive two-day SPSS training programme offers a comprehensive, hands-on introduction to IBM SPSS Statistics, the industry-leading software for quantitative data analysis. Designed for researchers, students, and professionals needing to analyze quantitative data across various fields, the workshop focuses on equipping participants with the practical skills to manage, analyze, and interpret data effectively. Over two days, you will learn to efficiently navigate the SPSS interface, import and clean data, select and execute fundamental statistical tests (including descriptive, comparisons of means, and measures of association), accurately interpret the output tables and charts, and generate publication-ready reports. By the end of this programme, the participants will be confident and competent users of SPSS, ready to independently transform the raw data into meaningful, evidence-based insights for research projects.
